## **DETAILED ACTION**

### ***Claim Objections***

Claims 4-25 and 37-41 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

### ***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Group 1 is linear light-emitting element that has one light-emitting region formed in the longitudinal direction.

Group 2 is a linear light-emitting element that has a plurality of light-emitting regions formed in the longitudinal direction.

Group 3 is a light-emitting element where one of the two electrodes is arranged either diagonally above the other electrode or laterally separated from the other electrode.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An

argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

- Group 1, claims 1
- Group 2, claims 2 and 3
- Group 3, claims 26-36

Claims 4-25 and 37-41 will be added into their respective groups once the multiple dependency issue is corrected.

The following claim(s) are generic: None.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

In figure 10, applicant discloses a conventional light emitting element that is formed on a flat-plane substrate. The special technical feature of the applicant's application is the longitudinal formation of the light emitting element rather than the conventional formation of the light emitting element in a planar direction. Japanese publication 2002-184580 discloses an OLED device where the light emitting element is formed in the longitudinal direction and therefore applicant's special technical feature does not make a novel contribution over the prior

art. Therefore unity of invention is not fulfilled so there is no single general inventive concept between groups 1 and 2.

Group 3 does not disclose that the light emitting element is formed in the longitudinal direction and therefore does not form a single general inventive concept with groups 1 and 2.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
